

**Phase 1
synthetic tasks**

interface found:
dense codes, $K \geq 4$
identity 0.95 (8 symbols)

**Phase 2
frozen brain LM**

pilot 14.6%
-> 42.5% / 3.298 BPC
(+ hashed 3-char context)

**Phase 3
MB plasticity**

42.9% / 3.346 BPC
written but not read

Mechanism study

memory on KC->MBON
weights; sparse KC code
= retrieval key; read out
only via MBON spikes

Audit + revision

indexing bug found;
benchmark ~ n-gram;
sparse brain adds to it
only with little data
